## THE ABC'S OF FALL PROTECTION

There are three vital components to consider when selecting a fall protection system, often referred to as the ABC's of fall protection.

The ABC's of Fall Protection are:

- Anchorage
- Body Support or Wear
- Connecting Device

All components must be used together and be working properly to protect from a fall. While all components are essential, the most critical of the three is the connecting device. The connecting device will receive the most significant impact during a fall, and it must withstand that force.

### ANCHORAGE/ANCHOR CONNECTOR

OSHA defines anchorage as a secure point of attachment onto a structure. An anchor connector is a component used to attach the connecting device to the anchor, such as a beam anchor.

### BODY SUPPORT OR WEAR

Body support or wear is worn around the torso, such as a full-body harness. Full-body harnesses distribute fall arrest forces over the upper thighs, pelvis, chest, and shoulders. The harness will have a connection point centered on the back, which will be used to attach the connecting device.

### CONNECTING DEVICE

Connecting devices, such as shock-absorbing lanyards or retractable lifelines, join the body support and anchorage or anchor connector. The shock-absorbing lanyard is meant to absorb the energy produced by a fall, reducing the impact felt by the user.

## CALCULATING FALL DISTANCE

The diagram below illustrates how to calculate fall distance clearances using a standard 6' shock absorbing lanyard. If you have any questions or are unclear about any aspect of fall protection, please feel free to give us a call at 1-800-331-2973 or contact us via email at [NTGproducts@yahoo.com](mailto:NTGproducts@yahoo.com). We're happy to help!

## HARNESS OPTIONS & ACCESSORIES

Quick ship items will be shipped in 1-2 business days, depending on when the order is placed. Items that are "non-stock" typically require 5-7 business to ship.

### HARNESS OPTIONS

*All options are non-stock and will increase ship time to 5-7 business days.*

Option A: Shoulder pads (two pieces) **\$16.25**

Option F: Leg pads (two pieces) **\$31.25**

Option P: Removable, washable, retrofit back and shoulder pad (one piece) **\$43.75**

### HARNESS ACCESSORIES

*All accessories are stock items.*

1418 - 18" x 1-3/4" D-ring extension strap with D-ring on one end and locking snap on the other end. **\$38.20**

TL3 - Single leg tool lanyard **\$19.55**

U-Step - Two compact, lightweight 'packs' that easily attach to the left and right sides of a full-body harness. If a worker should fall, they can pull the webbing from the 'packs' and connect the locking clasps creating an adjustable loop. The worker can then step on the webbing alleviating harness pressure and suspension trauma. **\$28.45**

### COLOR OPTIONS

All harnesses are stocked in yellow except for the Stratos Line, which comes standard in green. Other available webbing colors are lime, orange, orange 2 (darker), red, blue, evergreen, gray, and black.

# BODY HARNESSES & VESTS

## STRATOS HARNESSES

The STRATOS Series full-body harnesses come standard in green, but alternate webbing colors are available. All harnesses feature Strato-lite leg and shoulder or back pads. Strato-lite padding enhances breathability and controls moisture through the use of open-celled air mesh, providing ultimate comfort.

### HARNESS OPTIONS FOR STRATOS HARNESSES:

- Option B: Hip D-rings for positioning
- Option D: Shoulder D-rings
- Option 9: Additional back D-ring with extension strap built into harness
- Option H: Chest D-ring
- Option U-Step: Suspension trauma straps

## TIE-BACK, LANYARD, AND ANCHOR ALL IN ONE 'LANCHOR' LANYARDS

Constructed of double layered webbing to meet extreme specifications, the 'Lanchor Series' lanyards are designed to tie back onto themselves, providing an extremely accommodating and adaptable means of anchoring - when other equipment or options may not be available. The "double-tuff" synthetic webbing is constructed with contrasting colors which acts as a wear indicator. If your lanchor ever becomes worn to the point that you can see the inside webbing (as shown), remove it from service immediately. The super-strong Lanchor snap hook (5K, 3.6K Gate) meets the ANSI Z359.1-2007 standard.

1-3/8" tubular synthetic webbing with shock pack and internal wear indicating core. Standard length: 6'.

## ROPE GRABS - ROPE AND WIRE ROPE

Manual Rope grab:

Worker manually slides the device to the desired position on the rope and releases it, locking it on the lifeline and providing the worker with fall protection. Great for sloped roofs because they lock in place once positioned.

Trailing Rope grab:

Little or no user positioning needed. Trailing grabs move up and down the lifeline with the worker, locking only when a fall occurs.

It is strongly recommended that lanyard length not exceed 3' when in use with a rope grab. This aids OSHA compliance and helps to reduce free-fall distances.

# HORIZONTAL LIFELINE SYSTEMS

Manufactured of synthetic rope or wire rope, horizontal lifeline (HLL) systems allow one or two workers (up to 310 lbs. each) to remain tied off while in horizontal transition between two anchor points. The lifelines can be anchored by anchorage connector straps, D-bolt anchors, anchor plates, or other compatible anchorage connectors. The line tensioner on the rope system is used for line adjustment and proper tension. Wire rope systems use a turn buckle and combination clamp to achieve proper adjustment and tension. All Horizontal Lifelines come in standard lengths of 30' or 60'.

# TRAVERSE TEMPORARY HORIZONTAL LIFELINE SYSTEMS

The TRAVERSE Series temporary horizontal lifeline offers ideal protection when an overhead anchorage does not exist, allowing up to two workers to tie off in each span. The TRAVERSE HLL provides continuous fall protection for the length of the line. The 42" tall end posts of the system are offset for ease of use, and can be set up to any cable length with a maximum of 60' between posts. Intermediate posts can be outfitted with a pass-thru bracket to allow a connector to continuously run the length of the system. Systems can be assembled in many different lengths, from 10'-360' (in 10' increments). Standard system works on I-beams from 6"-12" wide, and 2 1/4" thick flanges. Options are available for beams up to 36" wide.

## Performance Specifications:

**Height:** 42" working height (measured above beam)  
**Weight:** typical 60' system will weigh approx 99.5 lbs.  
**Working Capacity:** 2 users per span, no more than 6 per total system, 310 lbs. total each user with tools and equipment  
**Meets or exceeds:** OSHA & ANSI requirements

## Material Specifications:

**Posts:** Zinc plated  
**Steel Wire Rope:** Galvanized  
**Hardware:** Galvanized or Zinc Plated

# LADDER/RIGID RAIL CLIMBING SYSTEMS

Rigid rail climbing systems provide maximum climbing safety for workers in a multitude of applications, such as: towers, antennas, chimneys, stacks, scaffolds, support poles, wind generators, signs, water tanks, dams, silos, shipboard, ladders, and virtually any place that climbing must be done! The rail attaches quickly and easily to any ladder, step iron, or climbing surface. The trolley moves freely along the rail until a slip or fall occurs, when the trolley instantly locks, and the fall is immediately arrested.

# RESCUE, RECOVERY, & CONFINED SPACE SYSTEMS

## R50 SERIES, 3-WAY UNIT

The R50 Series Unit is a self-retracting lifeline, capable of raising and lowering, for rescue or retrieval. If a worker slips or falls, the unit locks up, arresting the fall. The system can then be activated into winch mode, raising or lowering the worker to safety. The R50 also has a friction brake that prevents the crank handle from free-wheeling while under a load. The unit is made of a rugged, lightweight cast aluminum housing, and includes a mounting bracket for Tripod or Davit Systems, a #45 split pulley, and carabiner for attaching the lifeline to an anchor such as a tripod. 50' galvanized or stainless steel wire rope or 50' Technora® synthetic rope.

## CONTROLLED DESCENT DEVICE

The descent device can be installed anywhere on a single piece of approved 7/16" rope of any length. It can be used with a full body harness and fall arrest system. To decrease friction on the rope and descend, the devices lever must be moved. As an added safety measure, if the lever is accidentally fully pressed, descent will be stopped immediately and automatically. The device can also be reversed and used to lower an individual in a rescue situation.
